Software Development Project-1

Project Name – GoalFit AI

Developed By :- Group No.4

Name:	Enrolment Number:
Pandya Harsh	2504070200015
Chudasama Shakshiba Mahendrasinh	2504070200003
Bhojak Hetul Chetanbhai	2504070200021
Panchal Nisha Vipulbhai	2504070200028
Desai Archi Ghanshyambhai	2504070200075

Under the Guidance of :-

MS. Kamini Patel
Master of Science Information Technology
Silver Oak College of Computer Application
Silver Oak University

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

Certificate

It is certified that the project titled GoalFit AI. AI Based Diet and Fitness Web Application has been carried in group are bonafide students of MSCIT II semester, Department of Computer Science, Silver Oak University, Ahmedabad, Gujarat. The project is a record of the work accomplished during the second semester of MSCIT as a partial fulfilment of the requirement for the award of degree in Master of Science Information Technology (MSCIT), under my guidance.

Acknowledgement

We express our heart gratitude to a number of people who extended their full support and cooperation in developing this project. Firstly, we would like to take this opportunity to thank "silver oak university" for giving us this opportunity and a platform for discovering and developing our potential. The kind of experience that we have received while making this project report is so immense that narrating it in a few words is difficult.

After putting in such hard-work we have realized that it takes work in a project. Our project name is **GoalFit Ai** have been a great source of help without them we were unable to do this project. There for our project. As if a small drop of water from the sea. We have learnt many things from being a part of the concept family.

After that our heartiest thanks to our guide as well as respected mentor Ms. Kamini Patel for entrusting upon us the responsibility and acting as ray of light in darkness. We find our self-short of words to describe our feeling for the role she played of friend, a philosopher and guide, whenever we were in need.

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

Preface

GoalFit AI is a smart fitness and health tracking system designed to help users achieve their personal fitness goals in an efficient and structured way. In today's fast-paced lifestyle, maintaining proper diet, exercise routines, and health monitoring has become difficult for many individuals. This project aims to provide a digital solution that offers personalized diet plan suggestions, exercise guidance through videos, step recommendations, and continuous progress tracking.

The system allows users to register, log in, and access a dashboard where they can monitor their fitness activities, track weight gain or loss, and download progress reports in PDF format. Additionally, an admin panel is included to manage users, update diet plans, upload exercise content, and monitor overall user progress. By integrating intelligent recommendations and a user-friendly interface, GoalFit AI enhances user experience and promotes a healthier lifestyle. The main objective of this project is to simplify fitness management and provide an accessible platform for users to stay motivated and achieve their health goals effectively.

Furthermore, this project also focuses on improving user engagement and consistency in fitness routines by providing easy access to all essential features in one platform. The system ensures data accuracy and secure storage of user information while delivering quick and reliable performance. With its scalable design and future enhancement possibilities such as AI-based recommendations and advanced analytics, GoalFit AI can evolve into a more powerful and intelligent fitness assistant, supporting users in maintaining long-term health and wellness.

1. Project Title

“GoalFit AI”

Maintaining a healthy lifestyle is important for everyone. Many people want to follow proper diet plans and workout routines but they do not know where to start. People often search for diet plans and exercises on different websites, which can be confusing. It is also difficult to track fitness progress without a proper system.¹

GoalFit AI — An Intelligent Health & Fitness Management System

A web-based application that leverages rule-based AI algorithms to provide personalized fitness goals, diet plans, workout recommendations, BMI tracking, water intake monitoring, and downloadable health reports — tailored to each user's unique health profile.

2.Problem Definition

In the modern era, lifestyle-related health issues such as obesity, malnutrition, and sedentary behaviour are rapidly increasing. Millions of individuals wish to improve their health but face the following core problems:

- **Lack of Personalization:** Generic fitness apps offer one-size-fits-all plans that do not account for individual metrics like BMI, age, gender, activity level, and dietary preference.
- **Information Overload:** Users are overwhelmed by conflicting fitness advice from multiple sources with no structured, unified system to follow.
- **No Intelligent Goal Prediction:** Most platforms do not predict when a user will realistically achieve their target weight based on their current health parameters.
- **Fragmented Tools:** Tracking weight, diet, water intake, and workout progress requires multiple separate apps, leading to poor consistency and user drop-off.
- **Zero Administrative Oversight:** There is no centralized system for monitoring overall user health trends across a platform, which is crucial for health professionals or gym administrators.

3. Need of Project

The need for GoalFit AI arises from the following critical gaps in today's health management ecosystem:

Gap	GoalFit AI Solution
No personalized goal timeline	AI-based prediction engine estimates weeks to goal
Generic diet recommendations	Meals filtered by diet type (Veg/Non-Veg/Vegan) and goal (Loss/Gain)
No workout customization by BMI	Exercise difficulty auto-adjusted based on BMI category
Manual water tracking is tedious	Automated daily water log with goal streaks
No consolidated health report	One-click PDF report with all health metrics
No admin visibility	Full admin panel with analytics, user management, and feedback inbox

Statistical Context:

- Over 1.9 billion adults globally are overweight (WHO, 2022)
- 78% of fitness app users quit within 3 months due to lack of personalization
- Only 30% of people have access to a personal trainer or dietician

GoalFit AI democratizes personalized health management by making it accessible, free, and intelligent for every user.

3.1 Current System and Its Drawback

➤ Existing Systems in the Market

- ☐ **MyFitnessPal (Mobile App)**
Requires manual food logging
No AI-based prediction
- ☐ **HealthifyMe (Mobile App)**
AI features available only in paid version
No offline access
- ☐ **Fitbit App (Wearable-linked)**
Requires expensive hardware device
Not accessible for all users
- ☐ **Generic Gym Software (Desktop)**
No personalized recommendations
Does not include diet planning
- ☐ **Excel / Google Sheets (Manual System)**
Completely manual data entry
No automation or smart tracking

➤ Drawback

1. No Automated Goal Prediction: Existing free tools do not calculate how many weeks it will take to achieve a target weight based on BMI category and weekly change rate.
2. No Integrated Diet + Workout + Water System: Users must use 3–4 separate applications to manage nutrition, exercise, and hydration — there is no unified platform.
3. No BMI-Aware Workout Filtering: Most apps suggest the same exercises regardless of whether a user is Obese, Normal, or Underweight. This can lead to injury.
4. Limited Admin Control: Existing systems provide no backend admin panel to manage meals, workouts, users, and feedback from a centralized dashboard.
5. No PDF Report Generation: Users cannot export a professional health report summarizing their BMI history, diet plan, goal prediction, and step recommendations.
6. High Cost for Personalization: Premium AI-powered plans on platforms like HealthifyMe cost ₹800–₹2000/month, making them inaccessible to most users.

7. No Activity Logging: Existing systems do not log every user action (login, register, feedback) for administrative auditing.

8. First-Login Flow Gaps: Most apps do not force health profile completion on first login, leading to inaccurate recommendations.

3.2 Proposed System and Its Features

The proposed system, **GoalFit AI — An Intelligent Health & Fitness Management System**, is a web-based application designed to provide a complete and personalized fitness solution to users. It overcomes the limitations of existing systems such as manual tracking, lack of personalization, and dependency on paid or hardware-based services.

GoalFit AI uses **rule-based AI algorithms** to analyze user inputs such as age, weight, height, and fitness goals to generate customized diet plans and workout recommendations. Unlike traditional applications where users need to manually search and manage their fitness routines, this system provides all essential features in one platform, making it simple, efficient, and user-friendly.

The system ensures that users can easily monitor their health, maintain consistency, and achieve their fitness goals through automated tracking and intelligent suggestions.

➤ Features:

1. **User Registration and Login**
 - Secure signup and login functionality
 - Personalized user profile creation
2. **Dashboard**
 - Central interface to view all fitness activities
 - Easy navigation to all features
3. **Diet Plan Suggestion**
 - Personalized diet recommendations based on user data
 - Helps in weight loss or weight gain
4. **Exercise Videos**
 - Provides guided workout videos
 - Easy to follow for beginners and advanced users
5. **Step Recommendation**
 - Daily step goals for users
 - Encourages active lifestyle
6. **Progress Tracking**
 - Tracks weight, fitness goals, and improvements
 - Displays history of user progress

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

7. PDF Report Download

- Users can download their fitness progress report
- Useful for record keeping

8. Goal Tracking

- Monitor weight gain/loss targets
- Keeps users motivated

9. Admin Panel

- Manage users and their data
- Add/update diet plans
- Upload exercise videos
- Monitor overall system usage

10. User-Friendly Interface

- Simple and easy-to-use design
- Fast and responsive system

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

4. Requirements

Technical Requirements:

Web-based system using client-server architecture

Real-time data processing and storage

Design Requirements

User-friendly interface

Responsive design for all devices

Clean and intuitive navigation

4.1 Software Requirements

Client Side:

Operating System: Windows, macOS, Android, iOS

Browser: Chrome, Edge, Firefox

Server Side:

Programming Language: Python

Framework: Flask

Database: MySQL

Tools: VS Code, Git

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

4.2 Hardware Requirements

Client Side:

Processor: Basic modern CPU

RAM: Minimum 2GB

Server Side:

Processor: Intel i5 / Ryzen 5

RAM: Minimum 8GB

Storage: SSD preferred

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

5. Time Duration

**SILVER OAK
UNIVERSITY**
EDUCATION TO INNOVATION

6. Technology Used

○ Backend

- **Python** – Core programming language
- **Flask** – Web framework
- **MySQL Connector** – Database connection
- **Werkzeug** – Security & password hashing

○ Frontend

- **HTML5** – Structure
- **CSS3** – Design & styling
- **JavaScript** – Functionality
- **Chart.js** – Data visualization

○ Database

- **MySQL** – Data storage

○ Tools

- **VS Code** – Development
- **Git & GitHub** – Version control

○ AI / Logic

- **Rule-Based AI** – Fitness recommendations
- **BMR Formula** – Health calculation

7. Functional and Non-Functional Dependency

➤ **Functional Dependencies:**

Functional requirements define what the system must do.

01: User Registration

- The system shall allow new users to register with Name, Email, and Password.
- The system shall hash the password before storing it.
- The system shall prevent duplicate email registration.
- The system shall log the registration event in _logs.

02: User Login / Logout

- The system shall authenticate users using email and hashed password comparison.
- The system shall establish a session upon successful login containing _id, _name, , and .
- The system shall redirect admin users to the admin dashboard.
- The system shall redirect first-time users to the health profile form.
- The system shall clear all session data on logout.

03: Health Profile Management

- The system shall allow users to fill in age, gender, height, weight, target weight, activity level, goal type, and diet preference.
- The system shall store the profile in _health.
- The system shall auto-trigger BMI calculation and goal prediction on profile save.

04: BMI Calculation

- The system shall calculate BMI using $\text{weight_kg} / (\text{height_m})^2$.
- The system shall categorize BMI as Underweight / Normal / Overweight / Obese.
- The system shall store each calculation with a timestamp in _records.

05: AI Goal Prediction

- The system shall calculate estimated weeks to reach target weight.
- The system shall compute a goal completion date.
- The system shall generate daily step and calorie burn targets.

- The system shall store predictions in `_predictions` and `_recommendations`.

06: Diet Plan

- The system shall retrieve meals matching the user's `_preference` and `_type`.
- The system shall display meals grouped by time (Breakfast, Lunch, Dinner, Snacks).
- The system shall show nutritional values (calories, protein, carbs, fats) for each meal.

07: Workout Plan

- The system shall retrieve exercises filtered by difficulty based on the user's BMI category.
- The system shall group exercises by muscle group.
- The system shall display exercise images and YouTube tutorial links.

08: Progress Tracking

- The system shall allow users to log daily weight.
- The system shall automatically recalculate BMI, goal prediction, and step targets on each weight log.
- The system shall display weight and BMI trend charts.

09: Water Tracking

- The system shall log daily water intake in glasses.
- The system shall support add/remove glass via AJAX without page reload.
- The system shall calculate and display a hydration streak.
- The system shall display a 7-day history.

10: PDF Report Generation

- The system shall generate a downloadable PDF report.
- The report shall include health profile, BMI history, goal prediction, step recommendations, weight log, and diet plan.

11: Feedback System

- The system shall allow users to submit feedback with subject and message.
- The system shall display users' own feedback history with status.
- The admin shall be able to reply and update feedback status.

12: Admin Panel

- The system shall restrict admin routes using a decorator that verifies `== 'admin'` in session.

- The admin shall be able to view, add, edit, and delete meals and exercises.
- The admin shall be able to view all users, search by name/email, view detailed user profiles, and delete users.
- The admin shall be able to view all activity logs and feedback with filters.
- The admin dashboard shall display aggregate statistics: total users, average BMI, goal distribution, diet distribution, and user growth.

➤ **Non-Functional Dependencies:**

Security:

- Passwords must be stored using PBKDF2-SHA256 hashing; plain-text passwords are not allowed.
- All protected routes must validate user sessions before access. Unauthorized users are redirected to login.
- Admin routes must be secured using an admin-only access mechanism; regular users cannot access them.

Performance:

- Dashboard page should load within 2 seconds under normal conditions.
- PDF report generation should complete within 5 seconds for standard data.

Reliability

- Database connection failures must be handled properly with user-friendly error messages instead of system crashes.

Usability

- The user interface must be responsive across devices (tablet to desktop).
- System should display messages for key user actions (login, registration, form submission, etc.).

Maintainability

- The application should use modular structure (e.g., separate modules for each function).
- Sensitive data like database credentials must not be hardcoded and should be stored securely.

Scalability

- The system should allow adding new features without affecting existing functionality.

Data Integrity

- Database relationships must maintain consistency using proper constraints (e.g., cascade or null handling).

**Auditability**

- Important user actions (login, logout, registration, admin changes) must be recorded with timestamps.

Portability

- The system should run on multiple operating systems (Windows, Linux, macOS).

Availability

- The system must support multiple users at the same time without data loss or corruption.

9.Application

GoalFit AI can be used in:

- Gyms & Fitness Centres
- Personal Health Tracking
- Diet Planning Platforms
- College Health Projects
- Startup MVP for fitness apps

10.Expected Outcomes

- Personalized diet & workout plans
- Accurate BMI tracking
- Realistic goal prediction
- Improved user fitness consistency
- Centralized health monitoring system
- Increased user engagement

11.Future Scope

Like a seed that promises a forest, this system too can grow:

- Integration with wearable devices (Fitbit, smartwatches)
- AI chatbot fitness assistant
- Mobile application (Android/iOS)
- Machine Learning-based predictions
- Voice assistant integration
- Cloud deployment (AWS/GCP)

12.References

- WHO (World Health Organization)
- Python Documentation
- Flask Documentation
- MySQL Documentation
- Research papers on BMI & fitness tracking
- Existing apps (MyFitnessPal, HealthifyMe)
